

Why Melasty

3111

LONG LINER

Uzun Meme Lastiđi (İGA)
Сосковая резина (IGA)

3111 Long Liner (IGA); due to the design and structure of bellows, convenient folding is provided and during the attachment of system to nipples vacuum loss is prevented. Provides ease of use.

3111 Uzun Meme Lastiđi (İGA) 'nın tasarımındaki k r kl  yapı sayesinde rahat katlanması sađlanmakta ve sađım bařlıđının memeye tutturulması esnasında sistemde vakum kaybı yařanmamaktadır. Ve kullanım kolaylıđı sađlamaktadır.

3111 Сосковая резина (IGA) из-за дизайна и сильфонной структуры обеспечивается удобная складивание и во время крепления системы к соскам предотвращается потеря вакуума. И обеспечивает простоту использования.

3111 Long Liner (IGA); designed after determining the deficiencies on the other liners as a result of R & D activities by **Melasty** engineers, design owned by **Melasty**.

3111 Uzun Meme Lastiđi (İGA) **Melasty** m hendisleri tarafından ar-ge alıřmaları sonucu diđer meme lastiklerindeki eksikler tespit edilerek dizayn edilmiř tasarımı **Melasty**'e ait olan  r nd r.

3111 Сосковая резина (IGA) разработан после определения недостатков других сосковых резин в результате R & D деятельности инженерами **Melasty**, дизайн принадлежит **Melasty**.

3111-İGA

The neural stimulation effect that is created by the nipple and breast massage, causes the secretion of hormone; Oxytocin. Oxytocin hormone starts to milking and facilitating milking through the bloodstream, after stimulation of nipples. Secretion of the Oxytocin hormone lasts for **5 to 7 minutes**. Milking must be completed within this period.

3111 Long Liner (İGA) ergonomically shaped and was developed for high-yielding cattle. Wider size of claw connections with liner (**Ø 14 mm.**) allows milk reaches claw from nipple immediately (faster). This feature is especially important for highly efficient milking animals. Otherwise, the remaining milk in Teatcup will go back at high speed (**70 km/hour**) back to the breast and crashes to nipple to damage. This is to prevent damage **Melasty** as a result of their R & D activities. **Melasty** engineers have designed 3111 İGA to prevent damage as a result of their R & D activities.

Meme başına ve memeye yapılan masajın yarattığı direkt sinirsel etki, oksitosin hormonunun salgılanmasını sağlar. Oksitosin hormonu kan yoluyla memeye ulaşır sütün indirilmesi işlemini sağlar. Oksitosin salgılanması **5-7 dakika** sürer. Bu süre içerisinde sağımın tamamlanması gerekir.

3111 Uzun Meme Lastiği (İGA) Yüksek verimli inekler için geliştirilmiş; ergonomik yapılı meme lastiğidir. Memelik lastiklerinin pençe ile bağlantısının geniş olması (**Ø 14 mm.**), sağılan sütün derhal (hızla) meme başından pençeye ulaşmasını sağlar. Bu özellik, özellikle yüksek verimli hayvanların sağımı açısından önemlidir. Aksi takdirde, kadeh içinde kalan süt büyük bir hızla (**70 km/saat hızla**) memeye geri çarpar ve memeye zarar verir. Bu zararı engellemek için **Melasty** mühendisleri yaptıkları ar-ge çalışmalarını sonucunda 3111 İGA'yı tasarlamışlardır.

Массаж сосков и вымени обеспечивает прямое влияние нейронных секретий гормона окситоцина. Окситоцин является гормоном, через кровь достигает сосков и осуществляется процесс доения. Окситоцин секретація длітся от **5 до 7** минут. Доение должно быть завершено в течение этого периода.

В доильных аппаратах Melasty выходы используемой сосковой резины разработано как **Ø14мм**. Широкая соединение сосковой резины с коллектором обеспечивает быстрый доступ молока из соска в коллектор. Это особенно важно в доений высокоэффективных животных. В противном случае оставшийся молоко с большой скоростью (**70 км/час**) врезается обратно в соски и повреждает их. Чтобы предотвратить такое повреждение инженеры **Melasty** в результате своей R&D деятельности спроектировали 3111 İGA.

Lactic acid in the milk, hot or cold water used during the washing cycle, weather conditions, ozone in the environment and repeated movement during milking, causes the liners deformed (elongation) before expected expiration period. And this causes a reduction of strain within the teatcup shell.

On 3111 IGA Liners; as a result of R & D carried out by **Melasty**, insertion part of liner has been upgraded to two stages to bring the performance level increased again by taking from section (level) **A** to section (level) **B**, when the deformation occurs.

Sađım esnasında kullanılan meme lastiklerinde, sütteki laktik asit, yıkama esnasında kullanılan sıcak ve sođuk su, dıř hava kořulları, ortamda bulunan ozon ve meme lastiđinin sađım esnasında yapmıř olduđu tekrarlanan mekanik hareket, meme lastiđinin kullanım suresi dolmadan deformasyona uđramasına (uzamasına) yol ađmaktadır. Ve memelik kılıfının ięersindeki gerginliđin azalmasına sebep olmaktadır.

3111 İGA Meme lastiđi ise, **Melasty** tarafından yapılan arge sonucu kılıfın takıldıđı kısım, iki kademeye ęıkarılarak, deformasyon meydana geldiđinde meme lastiđi **A** kademesinden **B** kademesine getirilerek kılıf ięersindeki gerginlik eski haline getirilerek performansı tekrar yükseltilmektedir.

Во время доения используемая сосковая резина;молочная кислота в молоке, используемая во время промывки горячая и холодная вода, внешние погодные условия, озон в окружающей среде и повторяющие механические движений сосковой резины во время доения вызывают деформации сосковой резины до истечения срока использования. Эта деформация приводит к снижению напряженности в корпусе доильного стакана.

B сосковой резине 3111 IGA, часть оболочки отделена двумя делениями и при деформации подтянув сосковую резину на стакан с **A** до **B** деления напряжение внутри оболочки повышается и производительность увеличивается снова.

7050

MILKING CLAW (Complate) 240cc

240cc- Komple Melasty Pençe

Коллектор 240cc (Комплект)

As a result of R & D carried out by Melasty, on 7050 Complete Claw, the diameter of Milk-inlet nipples increased to 18,5mm to have the milk easily from liner, also the Milk-outlet tube has been expanded to 21mm so after closing the claw, milk transition made more comfortable. Thus, milking time was shortened.

Due to the vacuum fluctuations, milk gets back in to the nipples, this causes the biggest reason for udder diseases. On 7050 Complete Claw the capacity has been increased to 240cc to prevent this by reducing the fluctuations while milking.

Melasty tarafından yapılan arge sonucunda, üretilen 7050 Komple Melasty Pençe'de sütün pençeye giriş yaptığı ayakların çapı 18,5mm ye çıkartılarak sütün meme lastiğinden rahat bir şekilde alınması sağlanmış, pençe kapağında ise, sütün süt hortumuna çıkış yaptığı kısım 21mm ye genişletilerek sütün pençeden rahat bir şekilde geçişi sağlanmıştır. Böylece sağım süresi kısaltılmıştır.

Vakum dalgalanmaları sebebiyle memeden çıkan süt tekrar memeye geri girmekte ve meme hastalıklarının en büyük sebebi olmaktadır. 7050 Komple Melasty Pençe'de ise pençe hacmi 240cc ye çıkarılarak sağım esnasında meydana gelen vakum dalgaları azaltılarak bu engellenmektedir.

В результате проведенной Melasty R&D деятельности, произведенный 7050 Коллектор (Комплект) вход молока в коллектор увеличен до 18,5мм для получения с легкостью молока из сосковой резины, а выход молока из коллектора в молочный шланг расширен до 21мм для комфортного прохождения через коллектор. Таким образом, время доения сведено к минимуму.

Из-за колебаний вакуума выходящая из сосков молоко попадает обратно и является основной причиной заболеваний вымени. А в 7050 Коллектор (Комплект) объем увеличенный до 240cc уменьшает колебаний во время доения и препятствует этому.

3442

SINGLE MILK TUBES

Tekli Süt Hortumu

Молочный шланг

As a result of R & D carried out by **Melasty**, on 3422 Single Milk Hose, Milk-outlet tube OD x ID designed as **Ø25mm** by **Ø16mm**, Internal Diameter has been expanded for a more convenient transition

During the hot weather conditions, hose adhesion after softening while milk flow, has been prevented with the wall thickness of **4.5 mm** and internal diameter **Ø16mm**.

Melasty tarafından yapılan arge sonucunda, üretilen 3422 Tekli Süt Hortumu **Ø25mm x Ø16mm** olarak tasarlanmış tekli süt hortumlarının iç çapı genişletilerek sütün pençeden süt güğümüne geçişi rahatlatılmıştır.

İç çapı **Ø16mm** et kalınlığı ise **4,5mm** olarak yapıldığında sıcak havalarda süt geçişi ile birlikte hortumun yumuşayarak yapışması engellenmiştir.

В результате проведенной **Melasty** R&D деятельности, произведенный 3422 Молочный шланг разработан увеличенным внутренним диаметром **Ø25мм x Ø16мм** для более удобного прохода молока из коллектора в доильное ведро.

Когда произведено с внутренним диаметром **Ø16мм** и толщиной **4,5мм** предотвращено смягчаясь прилипанию шланга при прохождении молока в жаркую погоду.

7003

TUBE CLIP

Melasty Hortum Kelepçesi

Зажим шланга

As a result of R & D carried out by **Melasty**, 7003 Melasty Hose Clamp produced by soft material, to prevent the clamp deforming the single milk tubes and pulse tubes. Due to its monolithic structure, it is prevented from falling during use.

Melasty tarafından yapılan arge sonucunda, üretilen 7003 Melasty Hortum Kelepçesi yumuşak malzemeden üretilerek kelepçenin, tekli süt hortumu ve nabız hortumunun formunun bozması, yekpare yapısı sayesinde zaman içerisinde kullanım esnasında hortumlardan düşmesi engellenmiştir.

В результате проведенной **Melasty** R&D деятельности, произведенный 7003 Зажим шланга **Melasty** изготовлено из мягкого материала . Благодаря мягкой структуры зажима предотвращено нарушение формы молочного и вакуумного шланга. С течением времени во время использования, благодаря монолитной структуре исключена возможность падения.

3271

TWIN PULSE TUBES

Nabız Hortumu

Вакуумный шланг

During the manufacture of **Melasty** Milking Machine Chassis, the vacuum line is provided in a closed circulating system, thus, vacuum line has been isolated from corrosion may occur on chassis (rust, decay, holes may occur on chassis) by use of time. 5mm sheet was used in connection with air tank and chassis and the vibration resulting sound has been blocked, thus more solid and strong structure was redesigned.

Melasty süt sağma makinesinin şasesinin imalatında vakum hattının kapalı bir sistemle dolaştırılması sağlanmış, zaman içerisinde şase üzerinde meydana gelebilecek olan korozyondan (paslanma, çürüme, şasede meydana gelebilecek delikler) vakum hattı izole edilmiştir. Hava tankının şase ile bağlantısında 5mm lik sac kullanılarak vibrasyonla oluşabilecek ses engellenmiş, ve sağlam bir yapıya kavuşturulmuştur.

В производстве шасси доильного аппарата **Melasty**, вакуумный трубопровод обеспечивается замкнутой системой для циркуляции, таким образом вакуумный трубопровод изолирован от возникающих с течением времени коррозий (ржавчины, гниения, отверстий которые могут произойти на шасси). Вакуумная система, установлена на шасси с использованием металлической пластины толщиной 5мм, было достигнута прочная конструкция и вибрации на шасси сведены к минимуму.

7005

VACUUM DISTRIBUTOR

7007

3/4 20MM HOSE FITTINGS

3/4 20mm Erkek Hortum Rekoru

3/4 20mm Штуцер

7006

3/4 BUTTERFLY HANDLE BALL VALVES

3/4 Kelebek Küresel Vana

3/4 Шаровой Кран Бабочка

Due to vacuum tank outlet is smaller and air partition was made in narrow diameters, decrease in volumetric flow rate was discovered as a result of R & D carried out by Melasty. This problem was reduced with development of Melasty 7005 Vacuum Distributor with Inlet $\varnothing 30\text{mm}$ – outlet $\varnothing 24,5\text{mm}$ and air tank vacuum outlet was upgraded to $\varnothing 32\text{mm}$, thus makes machine breathes more comfortable.

Melasty tarafından yapılan arge sonucunda, üretilen süt sağım makinelerinde pompa tarafından üretilen vakum, vakum tankının çıkışının küçük olması ve hava taksimatının dar çaplarda yapılmasıyla makine debisinde büyük ölçüde düşüş saptanmıştır. Bu sorun, Melasty tarafından geliştirilen 7005 Vakum Distribütörü'nde giriş $\varnothing 30\text{mm}$ – çıkış $\varnothing 24,5\text{mm}$ ve hava tankının vakum çıkışı ($\varnothing 32\text{mm}$) yükseltilecek makinanın rahat nefes alması sağlanmıştır.

В результате R&D деятельности, осуществляемой Melasty был обнаружен значительное снижение скорости потока воздуха в случае малого входа, выхода вакуумного бака аппарата и узкого диаметра вакуумный распределителя. Эта проблема, решена за счет увеличения 7005 Вакуумный распределителя вход $\varnothing 30\text{mm}$ – выход $\varnothing 24,5\text{mm}$ разработанным Melasty и обновлением выхода вакуумного бака ($\varnothing 32\text{mm}$)

Tank Capacity (L)	: 18

MILKING GROUP

Liner Type	: Long Liner Silicone
Bucket Type	: S/S
Bucket Volume	: 30 Lt.
Cluster Weight (gr)	: 2250 Gr.
Milk Claw Capacity	: 240 cc
Milk Hose	: 225mm (25mm x 16mm)
Pulse Hose	: 200mm (14mm x 7mm)

OPTIONAL FEATURES

Pump Type	: Oil Pump (DYS - 1 PS)
-----------	-------------------------

DKS - 1 PK

FIXED SYSTEM & SINGLE MILK BUCKET UNIT

Tek Güğüm Üniteli Sabit Sistem (Büyükbaş)

TECHNICAL FEATURES

CHASSIS

Length (cm)	: 33
Width (cm)	: 50
Height (cm)	: 73
Weight (kg)	: 35

VACUUM PUMP

Engine Power (kW)	: 0,55 kW
Rotating (rpm)	: 1450 rpm
Voltage (V)	: 220 V
Flow Rate (L/min)	: 180-200
Palette Type	: Graphite
Palette Size (mm)	: 80 x 43 x 4.9
Tank Capacity (L)	: 18
